

Cross pollination chart

Although some fruit trees can self-pollinate, there are many varieties which require pollination between two or more trees before fruit will grow. When planting any of the following trees, always buy two or more from the same group to avoid your plant growing flowers but not fruit.

If you are unsure of which varieties to order, please speak to one of our friendly staff members!

Apples	Group 1	Gala Granny Smith Pink Lady Red Fuji
	Group 2	Granny Smith Jonathan
Pears	Group 1	Packham's Triumph Josephine de Malines
	Group 2	Beurre Bosc Williams
Plums	Group 1	Santa Rosa Satsuma
