

Product Information | Crushed Brick

Overview

Our range of Crushed Brick is derived from locally sourced products to provide customers with a sustainable landscaping option. Our bricks are sourced from local demolition sites and surplus from construction projects across Victoria and beyond, which are then crushed, screened and quality checked at our recycling plant located in Eaglehawk.

Our 20mm Crushed Aggregate is perfect for decorative purposes such as lawn replacements and garden features and our 10mm Crushed Fine is a great solution for areas which require compaction such as driveways and footpaths.

Offering a timeless appearance and being readily available from our landscape yards, Crushed Brick is an affordable and sustainable option for many commercial and domestic landscapers.

Applications and uses

- Decorative finish
